BELT CLEANING TECHNOLOGY

The difference in cleaning.

The ACT Group
Environmental Services Division

BULK MATERIAL HANDLING · SINCE 1991

A COMPLETE SYSTEM, NOT JUST A BLADE

We do not just sell belt cleaners. We stand behind them.

ACT carries belt cleaners for every application, built on partnerships with manufacturers like **American Eagle Manufacturing** and Razer. Primary, secondary or tertiary — we spec the cleaner to your belt, your material and your transfer point, then install it and maintain it.

And if our suggested cleaner does not significantly reduce your carryback problem, **we will always be there to make it right.** That is the difference between buying a blade and buying a cleaning system with the know-how behind it.

We also stock **retrofit blades** for Martin®, Flexco®, ASGCO®, Argonics® and Arch cleaning systems — see the Uni-Blade quick guide.

DID YOU KNOW?

Carryback comes off in stages.

85%

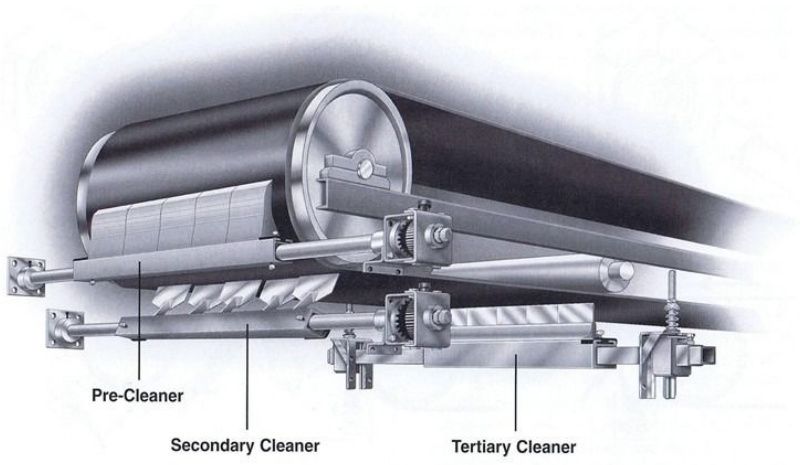

Primary cleaners remove up to 85% of carryback at the head pulley — most of it dropping in front of the cleaner, back into the material flow.

98%

Secondary cleaners are designed to remove up to 98% of the roughly 30% that gets past the primary.

98%

Tertiary cleaners take 98% of the little that remains — for washdown-clean return belts where it matters.

Pre-cleaner at the pulley face, secondary behind it, tertiary on the return run.

Tell us the belt, the material and the carryback problem.

We will spec it, install it and maintain it — ask about our Belt Cleaner Maintenance Program, where two certified techs service your cleaners and all replacement blades are included.
