FLASH SAFETY-SMART ISOLATION VALVE (SSIV)

Service the cannon. Keep the kiln hot.

The ACT Group
Environmental Services Division

BULK MATERIAL HANDLING · SINCE 1991

MAINTENANCE MADE EASY

A lockable gate between your crew and the process.

The **Flash Safety-Smart Isolation Valve** is a mechanical slide gate that isolates the air cannon from the discharge zone — so your crew can service the cannon on a live, high-temperature process **without stopping production** and without exposure to what is on the other side of the wall.

Designed with safety and simplicity in mind, the SSIV bolts between the air cannon valve and the mounting flange at the discharge end. Buy it as a **retrofit for the cannons you already run**, or get it standard: the SSIV comes pre-installed on every Flash Cannon sold.

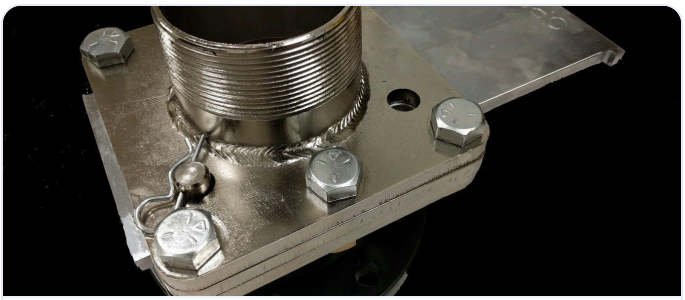

Features & benefits

- **Safety slide gate** — timely cannon maintenance on hot processes, without exposure
- Shields workers from severe heat, gases and high-temperature material
- Gate **locks out** against material and heat — LOTO-friendly
- Bolts between the cannon valve and mounting flange at the discharge end

Gate CLOSED — cannon isolated, safe to service

Gate OPEN — cannon in service, firing normally
